

High pressure pumps

Compact modular design

“S Class” units are reliable and user friendly. The diesel drive, from a manufacture with a worldwide service network, is directly connected to the ultra high pressure pump by a highly flexible coupling. this assembly is mounted on a single, shock absorbing sub frame as are all ancillary components such as boost pump , batteries and heater tank to from the basic module . Modular design enables a choice of optional extras

Complementary technology:

- Multi tool valves
- Radio control
- Direct vacuuming equipment
- High pressure guns
- Rotating guns , Rotor jet
- Abrasive cutting systems

APPLICATIONS

Petroleum Industry

- Heat exchanger cleaning
- Water Blast
- Rehabilitation of pipe line
- Rust and paint removal
- Tank cleaning
- Abrasive cutting
- Weld repair
- Under water maintenance

Marine industry

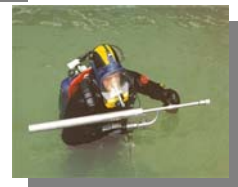

- Stripping and derusting ballast tanks, cargo holds, double bottoms
- Cleaning and stripping superstructures , decks ,companion ways, winches and anchor chains
- Removing burnt primer on newly built or repaired ship sections, weld preparation

Hull surface preparation to NACE/SSPC standard “WJ1/SC2”

Construction industry

- Removal of coating from walls and floors
- Exposing reinforcing bars
- Roughening and preparation work on concrete a surface

General industrial works

- Rust removal , Paint stripping
- Heat exchanger cleaning
- Structural and machine maintenance
- Abrasive cutting

Aluminum

Iron-Steel

Automotive

Paper

Chemical
